Enter a domain:

Check HSTS preload status and eligibility

Information

This form is used to submit domains for inclusion in Chrome's [HTTP Strict Transport Security \(HSTS\)](#) preload list. This is a list of sites that are hardcoded into Chrome as being HTTPS only.

Most major browsers (Chrome, [Firefox](#), Opera, Safari, [IE 11 and Edge](#)) also have HSTS preload lists based on the Chrome list. (See the [HSTS compatibility matrix](#).)

Submission Requirements

If a site sends the `preLoad` directive in an HSTS header, it is considered to be requesting inclusion in the preload list and may be submitted via the form on this site.

In order to be accepted to the HSTS preload list through this form, your site must satisfy the following set of requirements:

1. Serve a valid **certificate**.
2. **Redirect** from HTTP to HTTPS on the same host, if you are listening on port 80.
3. Serve all **subdomains** over HTTPS.
 - In particular, you must support HTTPS for the `www` subdomain if a DNS record for that subdomain exists.
4. Serve an **HSTS header** on the base domain for HTTPS requests:
 - The `max-age` must be at least 31536000 seconds (1 year).
 - The `includeSubDomains` directive must be specified.
 - The `preLoad` directive must be specified.
 - If you are serving an additional redirect from your HTTPS site, that redirect must still have the HSTS header (rather than the page it redirects to).

For more details on HSTS, please see [RFC 6797](#). Here is an example of a valid HSTS header:
